

WeeklyMarket Update

General Market News

- On Monday, the 10-year Treasury opened at 1.60 percent, down from last week's 1.82 percent. The 30-year yield opened at 2.08 percent, dropping from 2.30 percent. The short end of the curve is inverted again, with the 2-year yield at 1.45 percent and the 3-year yield at 1.42 percent.
- Global markets sold off last week, as the spread of the Wuhan coronavirus has led to concerns over its effect on global growth. The Chinese government has restricted travel ahead of the Lunar New Year to help prevent the spread of the virus. The holiday was also extended to February 2 in an effort to keep citizens at home.
- Concerns amid global growth caused West Texas Intermediate to fall by 7.5 percent. This decline pulled energy as a whole down by 4 percent, making it the worst-performing sector. Other lagging sectors included materials and financials. The top-performing sectors were utilities, real estate, and technology. Technology was supported by a large beat by Intel, as the growth of its cloud service segment accelerated.
- On Wednesday, December's existing home sales report was released. Sales of existing homes rose 3.6 percent, against expectations for 1.5 percent growth. This result brought the pace of sales to the highest level since February 2018. The housing sector staged a very impressive rebound in the second half of 2019 after slowing in late 2018, and these results point toward further growth in 2020. Low mortgage rates and high consumer confidence have drawn more prospective buyers into the market, leading to the impressive results we saw at the end of 2019.

What to Look Forward To

We started off the week with Monday's release of the December new home sales report. Sales came in lower than predicted, falling 0.4 percent during the month against expectations for a 1.5 percent increase. New home sales are a relatively small portion of overall sales, however, and the results can often be more volatile than existing home sales on a monthly basis. So, despite the disappointing result, if we look at longer-term trends, new home sales are continuing to exhibit strong growth. Growth in year-over-year sales was up to 23.7 percent compared to December 2018. As for supply of new homes on the market, this area remains constrained. But the uptick in construction we've seen recently could help fuel sales growth as more homes become available for

purchase. Given the strength in year-over-year growth and the potential tailwinds from new construction, the disappointing monthly result is nothing to be worried about for the time being.

On Tuesday, December's durable goods orders report will be released. Durable goods orders are expected to increase by 1.2 percent, following a surprising decline of 2.1 percent in November. November's results were caused by a sharp drop in volatile defensive aircraft orders, so a return to growth would help calm concerns of a prolonged slowdown in headline orders. Core orders, which strip out the impact of volatile transportation orders, are expected to show healthy 0.4 percent growth, following a 0.1 percent decline in November. Core orders are often seen as a

What to Look Forward To (continued)

proxy for business investment, so a return to growth here would be positive. It could signal a turnaround for business investment as we head into the new year.

Tuesday will also see the release of the Conference Board Consumer Confidence Index for January. It is set to increase to 128 in January, up from 126.5 in December. With confidence virtually unchanged in the fourth quarter, a return to growth would be a positive development, given that rising consumer confidence supports faster consumer spending. But even if we get an increase, the index would still sit below 2019's high-water mark of 135.8. We have some ways to go before confidence is restored to the recent highs. With that being said, markets continue to set new highs, housing prices continue to increase, and jobs remain plentiful, so there is every reason to believe that confidence can recover.

On Thursday, the first estimate of fourth-quarter gross domestic product (GDP) growth will be released. Economists are calling for results showing faster growth. Will the economy expand at a 2.2 percent annualized rate, up from 2.1 percent in the third quarter? This result would be lower than the 3.2 percent growth rate we saw in the first quarter of 2019, but in line with the overall pace of growth for last year. Personal consumption, the major driver of economic growth in the second and third quarters, is expected to grow

at an annualized rate of 2.3 percent during the fourth quarter, down from 3.2 percent in the third quarter. Given the importance of consumer spending to midyear expansion, GDP growth will bear watching as we kick off the new year.

Friday will see the release of December's personal income and personal spending reports. Economists expect to see both income and spending grow by a healthy 0.3 percent during the month, to cap off a solid year of growth. If the estimates prove accurate, December would mark the 10th straight month with increased personal spending. Spending grew at a similar rate throughout most of 2019, which indicates it was well supported by increasing incomes.

Finally, we'll finish the week with Friday's release of the second and final estimate of the University of Michigan consumer confidence survey for January. The first estimate showed confidence declining slightly from 99.3 in December to 99.1 in January. Economists expect a further modest decline, to 99, for the second estimate. But the index still sits well above the three-year low of 89.9 it hit in August, so there is no immediate cause for concern. Nonetheless, consumer confidence will be an important indicator to watch going forward, given the relationship between confidence and spending.

Certain sections of this commentary contain forward-looking statements that are based on our reasonable expectations, estimates, projections, and assumptions. Forward-looking statements are not guarantees of future performance and involve certain risks and uncertainties, which are difficult to predict. All indices are unmanaged and are not available for direct investment by the public. Past performance is not indicative of future results. The S&P 500 is based on the average performance of the 500 industrial stocks monitored by Standard & Poor's. The Nasdaq Composite Index measures the performance of all issues listed in the Nasdaq Stock Market, except for rights, warrants, units, and convertible debentures. The Dow Jones Industrial Average is computed by summing the prices of the stocks of 30 large companies and then dividing that total by an adjusted value, one which has been adjusted over the years to account for the effects of stock splits on the prices of the 30 companies. Dividends are reinvested to reflect the actual performance of the underlying securities. The MSCI EAFE Index is a float-adjusted market capitalization index designed to measure developed market equity performance, excluding the U.S. and Canada. The MSCI Emerging Markets Index is a market capitalization-weighted index composed of companies representative of the market structure of 26 emerging market countries in Europe, Latin America, and the Pacific Basin. The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index. The Bloomberg Barclays US Aggregate Bond Index is an unmanaged market value-weighted performance benchmark for investment-grade fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities with maturities of at least one year. The U.S. Treasury Index is based on the auctions of U.S. Treasury bills, or on the U.S. Treasury's daily yield curve. The Bloomberg Barclays US Mortgage Backed Securities (MBS) Index is an unmanaged market value-weighted index of 15- and 30-year fixed-rate securities backed by mortgage pools of the Government National Mortgage Association (GNMA), Federal National Mortgage Association (Fannie Mae), and the Federal Home Loan Mortgage Corporation (FHLMC), and balloon mortgages with fixed-rate coupons. The Bloomberg Barclays US Municipal Index includes investment-grade, tax-exempt, and fixed-rate bonds with long-term maturities (greater than 2 years) selected from issues larger than \$50 million.
